L/10 Mirrors for Spectrometers

Knight Optical can offer you stock and custom lambda/10 mirrors for use in Spectrometers, in a range of materials such as BK7 or equivalent, Zerodur, Quartz, UV Fused Silica and many more.

Mirrors are made from low expansion glass for optimum stability to maintain the lambda/10 flatness. The mirrors help produce high quality signals and can be coated with a variety of coatings to ensure that the perfect quality image in the wavelength you require is achieved:

- Enhanced aluminium 94%R for visible applications.
- 99.9% dielectric for laser use in visible applications.
- UV aluminium for UV applications down to 180nm.
- 98.5% dielectric for laser use in the NIR applications.
- Ion plated silver for NIR-2000nm applications.
- Protected gold for 750nm to far infra-red applications

Lambda/10 mirrors are used to produce a better quality signal from the mirror, resulting in a higher quality result for transmission.

Knight Optical can provide lambda/10 mirrors on a convex, concave and plano surface either from stock or custom. Send over the details of your requirement and we can see how we can help.

Typical specs for Plane lambda/10 stock items held:

Material:	Soda lime float glass
Diameter:	+0 / -0.2 mm
Length/width:	±0.1mm
Thickness:	+0.1 / -0.2mm
Surface quality:	<40:20 scratch/dig
Flatness:	$\lambda/10$ over 90% of mirror aperture (Rear is commercial polish)

All our lambda/10 mirrors are checked for quality in our state-of-the-art Metrology laboratory using our Fisba Interferometer, Starrett AV300 Video Imaging Device and Zygo Verifire XPZ Interferometer System,

allowing us to work to the highest [QA standards](#) and meet the tolerance specifications on these **precision components**.
