

## Product description

By applying Reinasan 24/7 Active Protection, additional functionalities are added to the object/product, including permanent protection against moss growth, air pollution and deterioration. Source control of organic and atmospheric pollution also takes place, thus preventing damage caused by possible frost. This extends the service life and helps reduce ownership costs. Periodic cleaning cycles are postponed or become a thing of the past. Applications include old slate roofs as well as concrete and ceramic tiles.

## Addition

The protection and care agents have no negative effects on existing properties of the construction or material types. Partly because of this, renovation is possible without high pressure. There is a 10-year guarantee on demonstrable performance. Partly due to measurements and easy maintenance with environmentally friendly products, there is total control. Aesthetically, nothing changes on the surface.

## Partner information

Reinasan works exclusively with partners. After a company successfully completes the training course, the trained employees are certified. This enables the partner to carry out assignments 100% independently. In this way, they can distinguish themselves by offering extra service and contribute to making our planet more sustainable and circular. Also, the system offers the partner the opportunity to generate more turnover.
