

LinearLevi-Conveyor

CONTACTLESS LINEAR TRANSPORT

The LinearLevi-Conveyor enables the contactless transport of sensitive materials.

No damage of the substrate during the transport

With the LinearLevi-Conveyor, the workpieces can be guided along defined lines, without any points of contact and without the use of compressed air. Due to the Ultrasonic Suspension Technology, the substrate is kept at a distance, which prevents micro-scratches and contamination. During the transport, a high flatness also on flexible substrates is provided.

Features of the LinearLevi-Conveyor:

- High flatness of the workpiece
- Possibility of heating or cooling sections
- No compressed air necessary
- Available in different lengths
- Customizable according to customer specifications

Innovative Technology:

Ultrasonic Suspension

Our handling systems use the ultrasonic suspension technology to apply the handling forces to the workpiece and can be used in all atmospheric processes.

Vibration generators with separate power electronics generate a compressed air film with repulsive forces. Process combinations enable the generation of attracting forces.

The surrounding air or process gas is compressed by the ultrasound. This allows components to be lifted and guided along defined paths without contact. In combination with negative pressure, workpieces can also be gripped on the upper side - without touching them.

The ultrasonic suspension technology requires less energy than other non-contact handling technologies.

We at ZS-Handling have a mission:

to enable our customers to handle sensitive products in production and for testing purposes without contact.

We make parts float.

Since 2006, we have been developing, producing and selling components and special machines for users in Europe, North America and Asia.

Our Products

LeviSolar-Gripper
 LeviWafer-Gripper
 MicroLevi-Gripper
 OptoMicroMed-Gripper
 RobotOverhead-Gripper
 UltraLevi-Chuck
 UltraLevi-Desk
 LinearLevi-Conveyor
 LinearOverhead-Transport-System
 LinearLevi-Inspektions-Module
 Modulares Waferhandling-System
 Levi-Roll

Applications

- Battery and fuel cell
- Foil
- Glass
- Lenses
- Medical Technology
- Packaging
- Wafers & Chips

Processes

- Loading and unloading
- Conveying
- Gripping
- Inspection
- Sorting
- Separating
