

FERMUAR YAPILARI The Structure Of The Zipper

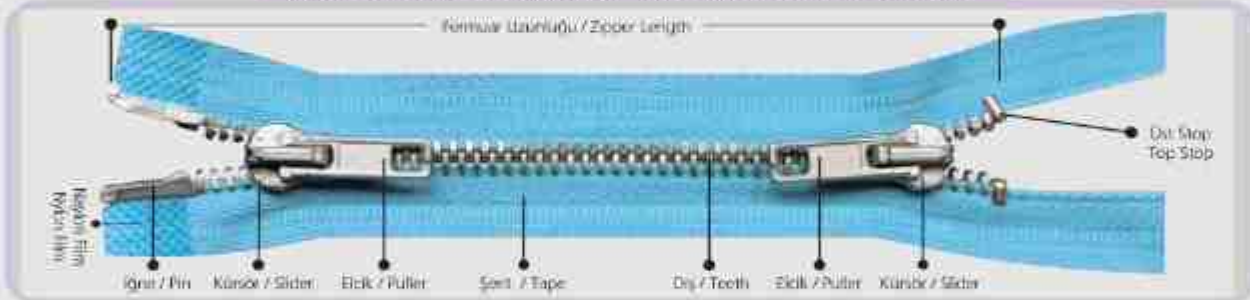

NAYLON DİPLİ FERMUAR / CLOSED END NYLON ZIPPER

KEMİK SEPARÉ FERMUAR / OPEN END DELRİN ZIPPER

METAL KOMBİ FERMUAR / TWO WAY METAL ZIPPER

Fermuarlar şerit, dişler ve kursor olmak üzere üç temel kısımdan oluşurlar.
Zippers can be divided into three major parts: the tape, the teeth and the slider.

Dişler

Fermuar şeridinin iki tarafında bulunan ve kursorün içinden geçtiği zaman birbirine kenetlenen kısımdır. Dişlerin birbirine geçmiş haline zincir denir.

Teeth

The teeth, also known as elements, are the parts on each side of a zipper that mesh, or engage with each other when passed through the slider. When the left and the right side teeth are engaged they are called chain.

Şerit

Kurdelesi sadece fermuarlar için dretilmiştir. Genellikle polyesterden yapılmıştır. fakat kullanım alanına bağlı olarak sentetik lifler, vinil veya pamuk ipliğinden yapılmış olanları vardır.

Tape

The tape is manufactured exclusively for zippers. It is usually made of polyester, but depending on use, synthetic fiber tape, vinyl tape, and cotton tape are also available.

Kursor

Kursor fermuar açılıp, kapandığı zaman dişleri birleştiren veya ayıran kısımdır. Kullanılan alanlara göre çeşitlendirilmiş değişik türlerde kursorler bulunuyor.

Slider

The Slider joins or separates the elements when the zipper is opened or closed. Various types of sliders are available depending on use.
