

NUTRICAM

*NUTRIENTS ENRICHED WITH CALCIUM AND MAGNESIUM
FOR FERTIGATION
Water-soluble NPK fertilizers for fertigation*

COMPOSITION (%w/w)

NPK Fertilizer	N tot.	N NH ₄	N NO ₃	N NH ₂	P ₂ O ₅	K ₂ O	MgO	CaO	Cu EDTA	Fe EDTA	Mn EDTA	Zn EDTA
8.34.12+ TE	8	8	-	-	34	12	-	5	0.002	0.02	0.01	0.002
14.11.22 +TE	14	2.8	7.6	3.6	11	22	-	8	0.002	0.02	0.01	0.002
12.6.24+ TE	12	3.6	3.4	5	6	24	2	4	0.002	0.02	0.01	0.002

NUTRICAM are water-soluble NPK fertilizers that contain the main NPK macro elements, EDTA trace elements and also magnesium and calcium for the prevention and treatment of physiopathologies caused by the lack of these two elements. This particular formulation is made with high quality raw materials and is characterized by the acidifying components that make phosphorus compatible with calcium resulting in a fully and assimilable product. In this way, the risks related to dripper occlusion or nutrient loss are significantly reduced. NUTRICAM guarantees complete and balanced nutrition and ensure maximum effectiveness even in the critical crop development phases.

ADVANTAGES:

- Calcium from calcium formate which is a fully assimilable source and a valid alternative to calcium chloride and calcium nitrate;
- Prevent and cure physiopathologies due to calcium and magnesium deficiency;
- Improve quality and preservability of the fruits;
- Make harvest quantity increase;
- Stimulation of photosynthesis processes;
- Acid reaction;
- Can be applied through irrigation systems in open field or greenhouse.

DOSAGE AND METHODS OF USE	CROPS	APPLICATION	DOSE
FERTIGATION	Fruit Horticultural Floricultural Industrial	2-3 Throughout the cycle	50-70 kg/ha

Warnings: For any mixtures with other products, make preliminary tests. Observe the dosages shown. Store the product in properly ventilated areas.
