

DIE-CUT BOARDS OR BASES

LAMINATED COMPACT CARDBOARD

Laminated cardboard sheets cut to the shape required by the client. These cardboards can be laminated in any colour and die-cut in several shapes to be used as a support for smoked fish, salted and sliced meats, as well as cakes and other confectioneries. Wide range of colours, metallised and non-metallised.

Technical possibilities

Wide range of shapes to die-cut (round, squared...)

Adapted weight (grsm)

Possibility to print with images or texts (flexography or offset)

Other details can also be personalised to suit particular demands

Manufacturing possibilities

PET layer, suitable for food contact

Adaptable weight (up to 610 gr/m²)

Possibility of adding a PET layer in the other side of the product

A GREAT IDEA TO IMPROVE FOOD SAFETY

NON-METALLIC GOLD AND SILVER

WHY?

With the objective to improve food safety in industrial processes, manufacturers are increasingly pushed to adopt metal detection technologies. These technologies can entail problems when using gold- or silver-plated cardboards or bases.

THE SOLUTION

These problems can be avoided by using laminates that have not been manufactured with metallic particles. Thanks to these new formulas, it is possible to keep using the popular golden and silver colours without loss of quality and without issues with metal detection technologies. The optimal laminate for each client will depend upon the metal detection technology and the colour hue used by each particular client.

I+D+I

Our innovation is focused in solving our client's present and future needs.
