

# Data Sheet

## RetailConnect

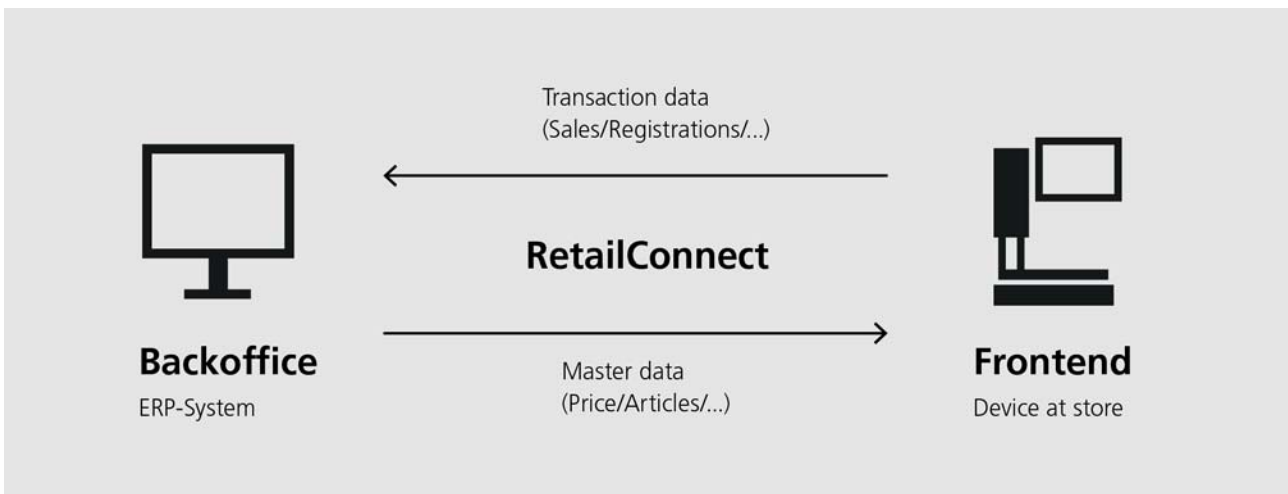

*RetailConnect – the universal tool for data conversion from any source. Irrespective of device and version the integrated communication driver ensures smooth transmission. Flexible, robust and unique in terms of integration.*

**More information**  
High performance with a wide range of solutions and options.

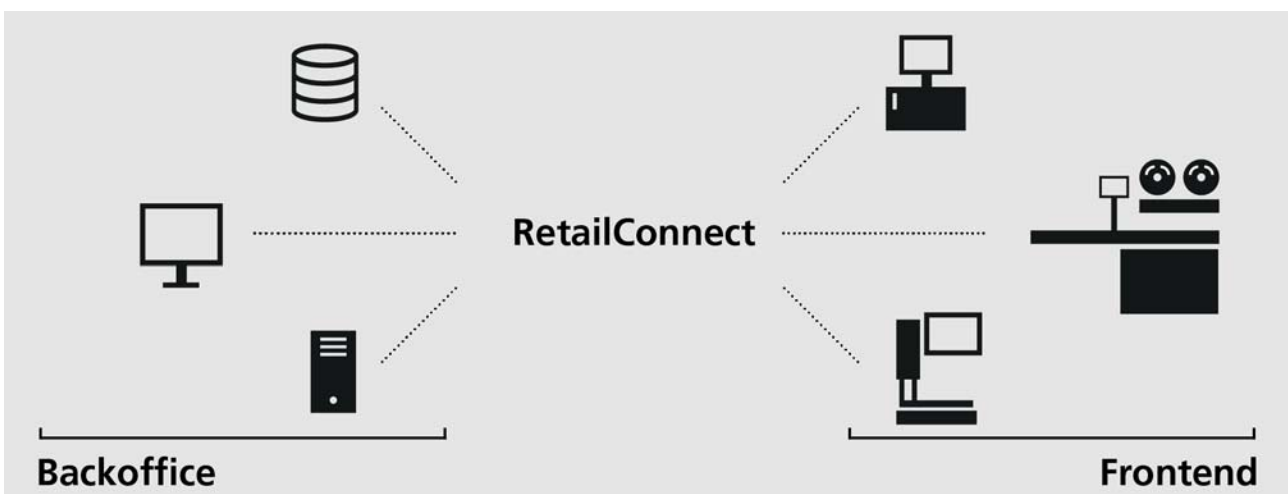

### Product description

RetailConnect allows communication between host systems and devices. Bidirectional transfer of master data and transactions (recordings and sales). Transfers can be started time-controlled or via trigger file. RetailConnect is run capable as a service or manually as command line program.

### Impressive USPs

- Central data transfer with parallel distribution to terminal equipment
- Flexible integration of devices in customer systems
- Easy connection to the monitoring in RetailControl
- Project-based connection of 3rd-party equipment and software possible

---

### **Evident product value for the use at the Point of Service**

- Master data is reliably transferred to the devices
- Therefore, price changes can be sent quickly to numerous devices. If a device within a network cannot be accessed, the data is buffered. As soon as the device is available again this data is transferred. No loss of data records.
- Sales data is completely retrieved for evaluation by back office systems.
- Within seconds, recordings made at the fresh food counter are available at the POS.

### **New and extended functions**

- Increased communication safety by transmitting image files via SFTP
- Faster distribution of very large datasets by transferring master data and transactions via web service
