**Pad printing and laser marking**

## Applications

# ELECTRICAL INDUSTRY

TAMPOPRINT GmbH is a well-established partner for the electrical industry. Our automated systems are in use world-wide. As a long-time partner of many well-known electrical companies and their suppliers we have developed a very high know-how in this industrial sector.

The electrical industry requires a high print image quality because often very fine prints are necessary. The maximum adhesion of the print and readability are other requirements. The solution using pad printing and/or laser marking can be considered as ideal.

Our pad printing and fully automatic laser machines meet the highest quality requirements when used in multi-shift operation with high throughput speed.

Highest precision of the print image registration on convex, round or flat parts by using the pad printing process, one to multicolor, or by using the ALFALAS® laser marking process goes without saying and meets the high standards for these industrial products. Process monitoring by using the latest camera systems will secure your production. We make markings, scales and decorations possible where other processes reach their limits.

Machinery construction "Made in Germany", supported by highly qualified staffs in the sales department, project management, engineering department as well as pre- and aftersales service will guarantee the professional realisation from the concept to the 24 hour production to our customers.

**MODULE ONE XS**  
Manual workstation with rotary index table  
and light curtain

**HYBRID 90-2**  
2-color pad printing machine  
with integrated cliché production

Applications

**For usability in everyday life.**
