

Interchangeable „Guide Bar“ !!!! It is Necessary if you use original Blocks from Lissmac

Guide Bars hold the block in line. No twisting possible.

If you use FAPI-EVO, no guide bars necessary because pyramids are pressed into the rubber. We get the same effect like in first picture....no twisting of blocks possible.

No changeable Guide Bar! It is not possible to use FAPI-EVO if you not also change the belt. But this system is from the beginning and not current status.
